## **VRSM**

(Lead: Saphetor S.A.)

### **Project abstract**

Saphetor is a European precision medicine company, responsible for creating VarSome. VarSome maintains, harmonises, and integrates over 130 genomic data sources, over 32 million publications, and additional user input. This comprehensive molecular resource powers VarSome's proprietary somatic, germline and CNV variant classification algorithms to give users a powerful interpretation engine for human genome data.

VarSome has been cited in over 1800 scientific publications and it is used by over 400 000 professionals spanning 6 continents working in healthcare and, both academic and industry, research settings.

VarSome's diagnostic support platform, VarSome Clinical is CE-IVD marked, GDPR and HIPAA compliant and is already deploys in over 200 laboratories worldwilde.

Collaborating with the Instand Consortium will allow us to share our expertise, and learn, by addressing the specific needs of the project to help clinicians achieve faster diagnoses for patients around the world.
