Section II: Object

II.1) **Scope of the procurement**

II.1.1) **Title:**

PCP to buy R&D services to develop Integrated and Standardized NGS Workflows for Personalised Therapy (Instand-NGS4P)
Reference number: 874719

II.1.2) **Main CPV code**

73100000 Research and experimental development services

II.1.3) **Type of contract**

Services

II.1.4) **Short description:**

On Oct 20th 2021, a contract notice was published as part of the EU project Instand-NGS4P to purchase R&D services from a number of R&D providers in parallel (PCP procurement).

The PCP procurement compared competing alternative solution approaches to address the following challenge: development of two fully integrated, standardized NGS workflows, from sample-pre-analytics to medical decision making, for routine diagnostics of common and rare cancers in adults and children.

As the common challenge exists of a number of sub-challenges, the procurement is divided into the following lots, each corresponding to one sub-challenge:

- Lot 1: Pre-sequencing (Specimen collection, nucleic acid isolation, library preparation)
- Lot 2: Sequencing
- Lot 3: Bioinformatics analysis
- Lot 4: Integrated reporting

This is a joint procurement by different procurers across Europe that are all facing the same common challenge and are thus looking for similar solutions (so-called 'buyers group').

II.1.6) **Information about lots**

This contract is divided into lots: yes

II.1.7) **Total value of the procurement (excluding VAT)**

Value excluding VAT: 610 246.65 EUR

II.2) **Description**

II.2.1) **Title:**

Pre-sequencing
Lot No: 1

II.2.2) **Additional CPV code(s)**

73100000 Research and experimental development services

II.2.3) **Place of performance**

NUTS code: AT221 Graz

Main site or place of performance:

Testing is expected to be done at the premises of the contractors using test material provided by the procurers and at a minimum of 3 and a maximum of 7 procurer sites.

II.2.4) **Description of the procurement:**

The procurement was announced in the form of a pre-commercial procurement (PCP) with a phased approach, i.e. a framework agreement covering 3 R&D phases:

- R&D up to solution design (Phase 1)
- R&D up to prototype (Phase 2)
- R&D up to original development and validation and testing of a limited set of first products or services (Phase 3).

After each phase, intermediate evaluations are carried out to progressively select the best competing solutions.

The contractors with the best-value-for-money solutions will be offered a specific contract for the next phase.

The phased approach with parallel contracts and intermediate evaluations will be followed within each lot. The result of phase 3 will be the development of 2 fully integrated NGS workflows with EQA.

For Phase 2, prototype validation is expected to be done at the premises of the contractors using test material provided by the Procurers. For Phase 3, the procurers (one or more) will carry out the testing and verification of

the solutions at their premises and optionally at an additional medical center. This testing may also serve as a first customer test reference for the contractors.

The selected operators will retain ownership of the intellectual property rights (IPRs) that they generate during the PCP and will be able to use them to exploit the full market potential of the developed solutions i.e. beyond the procurement.

In order to implement NGS into routine diagnosis, a fully integrated workflow from patient sample collection to final diagnostic result report is required. This PCP will now focus on developing 3 independent lots, to be modularly integrated into two independent workflows, which could be e.g. target panel-based and/or whole genome / whole exome-based, for the diagnosis and treatment decision making (including pharmacogenomics) in common cancer entities and rare cancer entities.

In addition to introducing quality control (QC) steps for each critical part of the workflow and validating individual lots, the integrated performance of the whole workflow will be validated.

The performance improvement which this PCP aims to develop, compared to the current state-of-the-art technology, is the integration of NGS data from tumor derived specimens (including liquid biopsy) with data from pharmacogenomic panels performed on non-tumor derived specimens.

Lot 1: Pre-Sequencing: a) Specimen collection, NA isolation b) Library preparation

Contracts are to be awarded for Lot 1 to a minimum of:

4 contractors for phase 1

3 contractors for phase 2

and

2 contractors for phase 3

Sufficient amount of good quality tenders were received to award the planned amount of contracts for Lot 1 (see section V for more information).

The abstracts of the winning tenders are available on www.instandngs4p.eu.

The PCP is expected to start on 16.04.2022 and end on 31.05.2025.

II.2.5) **Award criteria**

Quality criterion - Name: Technical quality criteria: A1) - A5), points each: 5 / Weighting: 100% each

Quality criterion - Name: Feasibility: B1) – B4), points each: 5 / Weighting: 100% each

Price - Weighting: 200% (points: 5)
